

# Higher Education Energy Efficiency Partnership Program

## BEST PRACTICES AWARDS

UC / CSU Sustainability Conference, June 2005

*A program created by the  
UC/CSU/IOU Partnership  
under the auspices of the  
California Public Utilities Commission*

**california state university  
long beach  
molecular and life sciences center**

**architects/programmers: ac martin partners**

**mechanical engineers: p2s engineering**

**lab planners: ahsc mclellan copenhagen**

**structural engineers: ac martin partners**

# Project Timeline

- Design started in 1998
- Construction completed in 2004

# CSULB Molecular & Life Sciences Center

- Best Practice Award Categories
  - HVAC Design
  - Innovative Control / Energy Information Systems

Energy Project of the Year, 2005  
Southern California Chapter

**HONOR AWARD**

FOR EXCELLENCE IN DESIGN

THE AMERICAN INSTITUTE  
OF ARCHITECTS  
LONG BEACH/SOUTH BAY CHAPTER

*New Science Building*

PROJECT

*California State University Long Beach*

OWNER

*A. C. Martin*

ARCHITECT

CONTRACTOR

*John M. Conover, AIA, President*

John M. Conover, AIA, President

*Richard J. ...*

Richard J. ...

PANEL OF JUDGES

Brian R. Daugherty, AIA

Michael M. Hixon, Jr., AIA

Walter Siegel, AIA

# CSULB Molecular & Life Sciences Center

- 3-story, 95,000 GSF Sciences Center
- Anatomy, Physiology, Biology, Bio-Chemistry and Organic Chemistry research and teaching laboratories
- 114 fume hoods

# Early Project Goals

- High standard of safety, health and comfort
- Highly energy efficient
- Effective energy use monitoring & reporting
- Establish a basis for future development

# Project Process

- **Whole Building Design Approach**
  - Improved energy efficiency
  - Reduced equipment sizes
  - Integrated utility systems

**NEW SCIENCE BUILDING**  
SECOND FLOOR PLAN

# Strategy – Reduce Cooling Loads

- Efficient Envelope
  - Exterior window shading on west & east exposures
  - Fritted double-pane glass on south, west & east exposures
- Efficient Lighting System
  - $< 1\text{W/SF}$
  - Direct-indirect lighting
  - Effective use of daylighting
  - Occupancy sensors in non-lab spaces

# Strategy – Reduce Cooling Loads

- Laboratory Equipment
  - Realistic diversity
  - Exhaust heat
- Occupancy Sensors
  - Reduce when unoccupied
- Cascading Airflow
  - Office → Labs → Exhaust

# Building Systems Summary

## ■ HVAC Supply Systems

- Manifolded variable air volume
- Separate cooling decks for different densities
- Low pressure drop design
  - Low velocities
  - Simple routing
  - Diversity

# Building Systems Summary

- Laboratory Exhaust Systems
  - Mostly manifolded variable air volume
  - N+1 redundancy
  - Low pressure drop design

---

# Building Control System

- Direct digital control for the HVAC, lighting and plumbing systems
- Building trend data and utility metering allows future energy optimization as building needs change

---

# Energy Reduction Best Practices

- ❑ Whole Building Design Approach
  - Efficient lighting
  - Efficient building envelope
  - Minimize lab equipment cooling loads
- ❑ Fume hood zone presence sensors
- ❑ Cascade airflow from non-lab spaces
- ❑ Variable air volume control of supply and exhaust
- ❑ Minimize over cooling and re-heat loads
- ❑ Low pressure drop design
- ❑ Reduce minimum air changes when unoccupied
- ❑ Increase zone temperature deadband when possible
- ❑ HVAC & control system commissioning

---

# Current Status

- Occupied for 10 months with building data and utility consumption trended
- Measurement-based commissioning project
  - Document building energy consumption
  - Optimize building performance
  - Train campus personnel on continuous commissioning practices

---

# Summary of Lessons Learned

- Plan for project success early
  - Set project goals including energy efficiency
  - Involve all stakeholders
- Whole building design approach
- Right-size equipment early to reap benefits
  - Mechanical → Electrical → Building Space → Lower costs
- Building energy & monitoring data can be utilized to continuously improve building energy performance

---

# Summary of Lessons Learned

***Things should be made as simple as possible, but no simpler.***

— Albert Einstein
